

ensimPro is the leading Web hosting automation control panel that lets service providers, resellers and site owners, centrally control and automate shared hosting tasks. Available for the Windows or Linux operating system, it includes all the tools hosting providers need to build compelling, commercial hosting plans for shared, reseller, and dedicated server customers.

Each Ensim Pro license comes bundled with Ensim PowerTools, a powerful add-on that enable your customers to automatically install the most popular web applications such as discussion boards, blogs, photo albums and more. With PowerTools, you can further differentiate your offering from competitors, upsell value-added services and drive new customer acquisition!

Ensim Pro hosting automation software gives you:

Effortless Management Interface

Using Ensim Pro is intuitive and fast - it significantly reduces the costs and technical expertise required to manage key hosting activities, such as deploying new sites, configuring users, and managing e-mail.

Rich, Flexible Features

Ensim Pro includes service plan management tools that help you serve a broader customer base. These tools simplify bundling popular Web applications and server resources into any number of individualized and targeted service plans.

Scalability for Growth, Stability for Customer Satisfaction

Ensim Pro was built to handle service providers of any size, with unsurpassed stability. When your reputation is on the line with strict service level agreements, Ensim's control panels ensure a superior level of customer satisfaction.

Ensim Pro is the ONLY solution certified for both Windows AND Linux

Incomparable Security

Ensim Pro is the only control panel software that includes a virtual private file system to create the industry's most secure hosting environment. Gain peace of mind by safely delegating remote access and scripting tools to your customers, knowing you will never compromise their data.

Ensim Pro significantly reduces the costs and technical expertise required to manage key hosting activities, such as deploying new sites, configuring users and managing email. Through automation, you can dramatically reduce administration time.

Ensim Pro has four levels of management control:

Service Provider Administrator

Manages the server, resellers and sites.

Reseller Administrator

Creates and manages sites on a portion of the server.

Site Administrator

Manages users and site configuration.

End User Administrator

Manages his/her email and supports the site as his/her permissions allow.

"Whether it's Linux or Windows, Ensim Pro provides our customers with a secure, highly reliable, and easy to use hosting management solution."
