

Enhance Security and Compliance Enforcement for SharePoint

Ensim Unify Enterprise Edition SharePoint Manager is a fine-grain provisioning and application management solution for Microsoft SharePoint. Ensim Unify SharePoint Manager provides enhanced security, management and compliance capabilities for both SharePoint Server 2007 and 2010.

All IT professionals know that managing the functionality of SharePoint while effectively meeting security and compliance requirements is critical. The only way to do this effectively is to eliminate ALL manual steps in the provisioning and updating of user entitlements down to the level of individual features.

Ensim Unify SharePoint Manager connects to existing ID management solutions and policy engines to ensure that security and compliance goals are automated and enforced throughout the provisioning / de-provisioning and management processes.

Top Benefits & Features

- Automated Provisioning
- Permissions Management
- SharePoint Group Management
- Compliance Reporting
- Business Process Automation
- Infrastructure Connectivity

Automated Provisioning

Automated provisioning of SharePoint sites, including site collection and sub-sites: allowing administrators to centralize administration of SharePoint and implement chargeback mechanisms as appropriate.

Permissions Management

Managing user permissions on various SharePoint sites enables users to meet compliance goals by providing a complete picture of who has access to each area.

SharePoint Group Management

Unify allows employees to add themselves to SharePoint groups on a self-service basis if permitted by IT policy.

Compliance Reporting

Real-time user and resource reporting with full audit trails.

Business Process Automation

Automate business processes by mapping security and compliance objectives into Ensim Unify – which automatically enforces those rules without disrupting existing business processes.

Infrastructure Connectivity

Connect to existing Identity management solutions and policy engines to ensure that security and compliance goals are met throughout the provisioning / de-provisioning and management processes.

•
Lowers Cost & Overhead

Automates IT Policy
